Caution : This method is **NOT** recommended for outdoor cameras.

For any configuration, you need to connect a monitor (HDMI or VGA) directly on the back of your recorder.
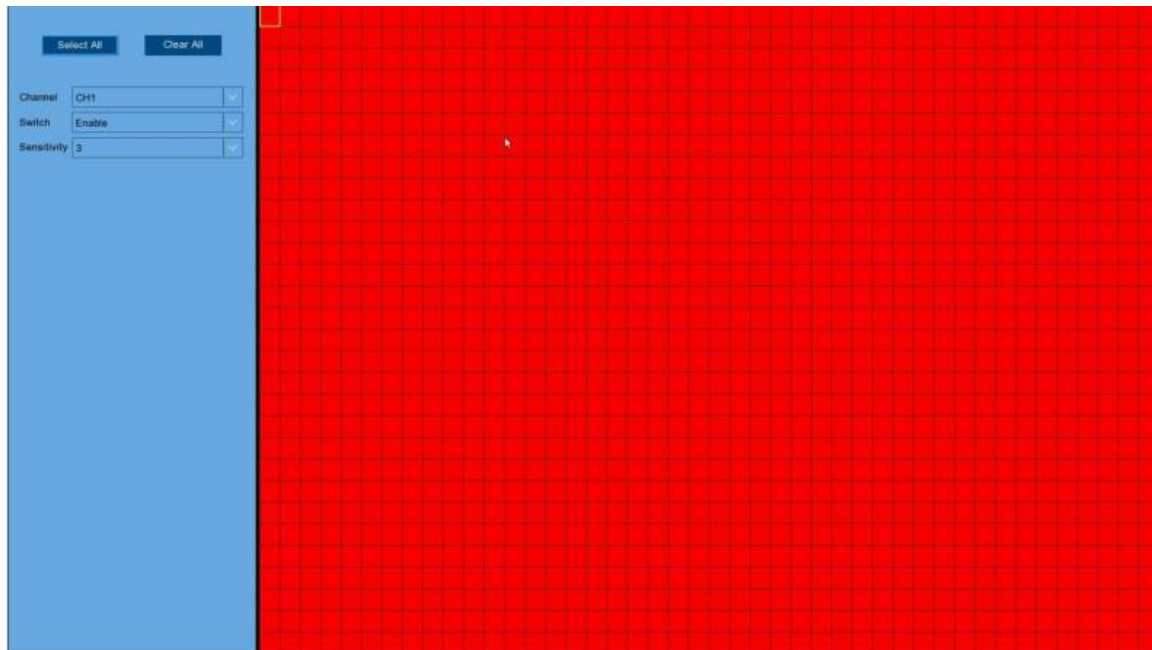

First, Enable Motion Detection for each camera.

**Setpup / Channel / Motion** than **Enable**

You have the possibility to adjust and accurate the Motion Detection by using 2 parameters : Sensitivity and areas (according your environment and distance between camera and your Trigger)

Sensitivity : Support 1 to 8 levels (8 is the highest Level)

Area : Set the trigger zone (**Alarm / Motion**)

Enable or disable some areas of your camera by choosing trigger zone

Red areas are active areas (Motion detection enable)

Left click to **SAVE**
